EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Ms. Lindsay McGuinness on 5/3/2004.

The application has been amended as follows:

Cancel claims 22-60.

Change claim 1 line 7, "the outbound" to "an outbound".

Reasons for Allowance

2. Regarding independent claim 1, Kalmanek (US 6,694,429) teaches a method and apparatus for translating local addresses to global addresses.

The system comprises receiving a message that specifies the outbound address domain (destination address, col. 13 lines 13-17).

The system comprises translating an overlapping local address from the inbound address domain into a unique global address that is specific to the specified outbound address

Art Unit: 2666

domain (col. 17 line 66 - col. 18 line 5). Regarding the limitation the global address that is specific to the specified outbound address domain, by definition, each global address is unique, therefore once the global address is chosen it is specific to the specified outbound address domain.

The system comprises selecting the unique global address from among a number of available global network addresses (col. 18 line 5-8).

The system comprises mapping the unique global address to the overlapping local address from the inbound address domain exclusively for the specified outbound address domain (col. 18 see Tables 2 and 3).

However none of the prior art of reference teaches or fairly suggests receiving an overlapping local address from an inbound address domain, wherein the overlapping local address is a destination host local address from a destination address domain. For support see spec (col. 11 lines 17 - 24). In contrast, Kalmanek teaches a decentralized method wherein the local addresses are never transmitted outside of their respective domains (col. 17 lines 47 - 55).

Support for this limitation may be found in the specification, col. 11 lines 17 - 24. "The DNS Proxy (fig. 1 box 104) performs domain name resolution across multiple address

Art Unit: 2666

domains. Upon receiving the domain name resolution request from the local DNS Server (fig. 1 box 142) in the source address domain, the DNS Proxy (fig. 1 box 104) determines the destination address domain for the destination host name, and sends a domain name resolution request to the local DNS Server (fig. 1 box 112, 122, or 132) in the destination address domain. The local DNS server in the destination address domain maintains a cache of domain name/network address mappings for hosts within the destination address domain. Upon receiving the domain name resolution request from the DNS Proxy (fig. 1 box 104), the local DNS Server (fig. 1 box 112, 122, or 132) in the destination address domain resolves the domain name, and returns the destination host local address to the DNS Proxy (fig. 1 box 104)."

Conclusion

3. Any comments considered necessary by the applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments of Statement of Reasons for Allowance."
